# Single Wall Stainless Steel Flue Systems

## Description

The flue system is manufactured from 430 grade stainless steel in 24 gauge material.

It is especially suitable for commercial gas, oil or air heater applications, domestic or commercial gas appliance connection and certain ventilation ductwork applications.

A complete range of standard fittings is available from stock with 'specials' manufactured to order on short delivery lead times.

Particular attention is given to manufacturing tolerances and quality to ensure that systems are easily and quickly assembled.

A comprehensive range of installation accessories including guy wire, eye bolts, barrel strainers etc completes the system - a single source for all your requirements!

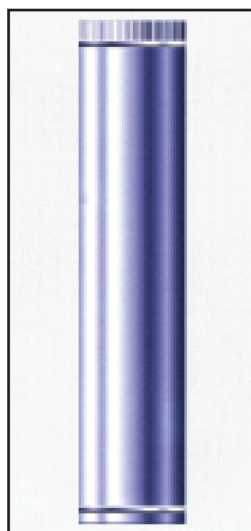

## Diameter

The Lindab flue system is available in the following diameters:-

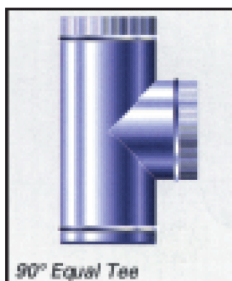

102, 127, 152, 178, 203, 228, 254, 304, 355, 406, 457 and 508mm.

## Pipe

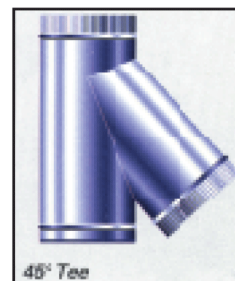

Available in all diameters and a range of standard lengths. Manufactured to ensure a perfect fit with the standard crimped end/locking band joint form of assembly.
